

# AcarZero™

# HOME

---

## INFO

220V socket powered device. Perfect for environments.

## DURATION

As long as you don't break it. Powered by electricity, no need to replace batteries nor to replace anything.

---

## COVERAGE

60/80 sq/m

---

## FEATURES

Two led lights-hold on-certify operativity.

---

## MEASURES

dimensions 7x4,9x,2,2 cm; weight 26 g

---

## USAGE

The less you care the better it works. No need to take care of it, just place it where it can act at its best. Do not put any object in front of it, leave at least 1m between its emitter and any placed object. One device per room.

---

## HOW

The ultrasonic waves emit a range of frequencies that interrupt dust mites' life cycle. The waves make the exoskeleton vibrate, the vibration unable them to feed themselves and to reproduce, leading thus to the extinction of the whole colony after 90 days.

---

## SCIENTIFICALLY PROVEN

University labs such as the Department of Veterinary Medicine of the University of Camerino and with the Department of Biomedical Sciences, Surgical and Dental of the University of Milan.

The results obtained after 90 days of product activation demonstrate the effectiveness of AcarZero™ in drastically reducing the concentration of dust mites in all powder samples tested, even if two samples were not completely negative.

The effectiveness of AcarZero™, becomes significantly effective after 75 days after the ultrasonic transmitter is switched on. This result is perfectly in agreement with the mechanism of action of the product, since the ultrasounds are able to act not killing the mites but inhibiting their reproductive capacity. The concentration of dust mites at 90 days is zero in three samples out of five while it is significantly reduced in the remaining two samples.

# AcarZero™

# PILLOW

---

## INFO

Battery powered device. To be used in combination with an anti-allergic AcarZero™ CASE for pillows.

---

## DURATION

10 months. Battery non replaceable.

---

## COVERAGE

3m. Enough to cover your pillow.

---

## FEATURES

A button to verify operativity. Led blinks when the device is working.

---

## USAGE

The less you care the better it works. No need to take care of it, just place it where it can act at its best. Check battery status every once in a while, to verify operativity.

---

# AcarZero™ WALL

---

## INFO

Battery powered. Perfect for environments.

---

## DURATION

As long as you don't break it. Battery is replaceable.

---

## COVERAGE

60/80 sq/m

---

## FEATURES

Magnet, will turn on the LED light to verify operativity. It can be screwed in to the wall vertically.

---

## USAGE

The less you care the better it works. No need to take care of it, just place it where it can act at its best. Do not put any object in front of it, leave at least 1m between its emitter and any placed object. One device per room.
